

ProDryer™

Professional Helmet Drying Systems

MODEL PD-1550

Data Sheet & Operations Manual

The PD-1550 Universal Helmet Dryer is the only helmet dryer to work with both 120 VAC and 12 VDC voltages. This next generation helmet dryer from RAC features 3 timing positions that allow you to set it and forget it. It features a decorative protected covering that protects your helmet and your ProDryer. Each ProDryer comes with a 120 VAC power adapter and a 12 VDC power cord to plug into any convenient power plug . It features a lower, more compact design and lighted power switch to indicate a completed timing cycle.

 Wall Adapter: Included

DC Power Connection: Included
 Finish: Durable Powder Coat
 Color: Black
 Enclosure: Steel
 Dimensions: 12" X 12" X 2.5"
 Weight: 6.4 lbs
 Warranty: 1 year

Operation

Place the **ProDryer PD-1550** in a clutter free area so as not to restrict the air flow around the ProDryer™. Select the power connection based on the most convenient power source and connect the 2.5 mm plug into the back of the ProDryer and then the power connector to the appropriate power source. Place the helmet on top of the ProDryer. Choose your timer setting by sliding the switch from the left to the right, selecting either 45 minutes, 90 minutes or continual timing modes. Press the red power rocker switch on the panel face in the up position. This will begin your drying process and the timing sequence. Once the timing sequence has been completed, the red power indicator light will turn off and your helmet will be dry. Typical drying times will be between 30 minutes and 45 minutes but may require adjustment based on ambient environmental conditions.

Ordering Information

PD-1550 ProDryer Universal Voltage Helmet Dryer

Caution: Do not use this product around pooled water or liquids that produce flammable vapors
